

Mikhail Barabanenkov graduated from Moscow Engineering Physics Institute in 1990. From 1979 until 1987 he held a technical position in Moscow Institute of Vacuum Technology. Since 1987 to present time he is working in Institute of Microelectronics Technology (IMT), Russian Academy of Science (RAS). He received Ph.D. and Doctor of Science Degree from IMT RAS in 1992 and 2001, respectively, in physics and mathematics. In 2001 he was promoted to leading researcher in the IMT RAS. He is a recipient of the "Doctors of Science of RAS" award from the Russian Science Support Foundation in 2004. His research interest include theoretical aspects of semiconductor radiation physics (theory of ion implantation, species diffusion, chemical reactions and phase transformations in ion implanted solids), modern optics and photonics (electromagnetic wave multiple scattering in inhomogeneous media, diffraction gratings, photonic crystals, negative index materials). Dr. M.Barabanenkov has published 100 publications in scientific journals and proceedings, has given several invited talks on microphotonics problems, and is co-author of two monographic papers in Progress in Electromagnetic Research (ed. J.A.Kong, EMW Publishing, Cambridge, Massachusetts, USA).
